The HYDRATION PRO — Your Ice and Water Solution

Whether working or playing, inside or outside, the need for and benefit from keeping individuals well hydrated for their personal health and productivity is well known.

HAVE YOU CONSIDERED THE HIDDEN COSTS OF *NOT* PROVIDING ADEQUATE HYDRATION?

Here Are The Facts...

- **75-80%** of Americans are regularly dehydrated!
- Dehydration results in over **500,000** hospitalizations annually!
- Dehydration is responsible for **$5.5 BILLION** dollars in health care costs!
- Dehydration results in **significant Performance/Production loss!**

DEHYDRATION = Lower Productivity + Higher Injuries

These statistics are shocking if you consider how easily the problem of dehydration can be fixed!

People who are exposed to extreme heat, or who work in hot environments indoors or outdoors, as well as any individual engaged in strenuous physical activities may may be at risk for heat related conditions caused by dehydration. Dehydration is more than just being thirsty.

OSHA recommends cooling water to 50°- 60°F for maximum re-hydration benefits.

People who are dehydrated can be affected in many ways:

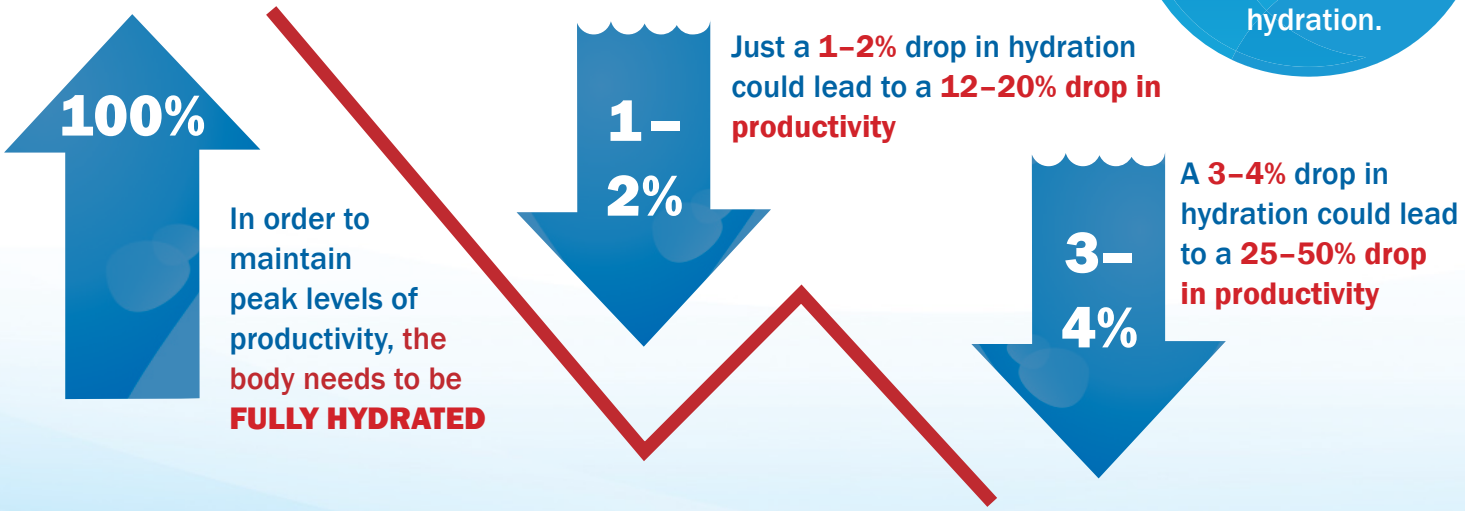

- Performance and/or Production is significantly reduced
- Slowed Reaction Times and Difficulty Processing Information
- Difficulty Concentrating/Hazy Thoughts/Dizziness or Clumsiness
- Fatigue More Quickly

Under the **OSH Act** employers have a duty to protect workers from recognized serious hazards in the workplace, including Heat-Related hazards like dehydration and the potential health consequences.

OSHA

OSHA recommends placing ample supplies of liquids close to the work/play area rather than relying on a water fountain to provide proper hydration.

HYDRATED PEOPLE PERFORM BETTER!

The HYDRATION PRO — Making Hydrating Refreshingly Easy

EASY TO USE AND MAINTAIN

The **Hydration Pro** makes and stores ice and water on-site within the machine that is ready to dispense "on-demand" and can be placed inside or outside depending on your needs. The **Hydration Pro** was designed to be energy efficient and reliable and is ready to use whenever you need ice or water – without waiting. The **Hydration Pro** is connected to your existing electric and water supply and further filters the water for a clean, fresh tasting product.

The **Hydration Pro** is easy to use! Push the button to automatically receive ice or water. The product will flow continuously until the button is released, allowing users to fill their personal containers, as well as water jugs. Cool the water to your preferred temperature by adding ice. It is versatile enough to accommodate many different sizes of containers so it can offer a full range of uses. The machine can also be outfitted with a bagging attachment to automatically bag the ice should you need it, allowing for easy transport and providing greater flexibility to meet your organization's needs!

The **Hydration Pro** was designed to be easy to manage and maintain. Periodic cleaning is all that is required! Should a component or filter need to be replaced over time, the machine was designed using a "Plug and Play" system so that parts can be replaced easily and quickly. In addition, the machine can be moved and operated at different locations or job sites as long as there is water and electric which is accessible.

ECONOMICAL

Consider that tap water costs <u>less than</u> $ .01 per gallon, and even if you only pay $.50 per bottle, bottled water adds up to $4 per gallon.

The Hydration Pro saves an organization's time and money by:

- ✓ Eliminating the need to order and manage ice and water supplies.
- ✓ Eliminating the need to schedule and accept deliveries of ice and water.
- ✓ Eliminating the need to arrange for storage and disposal of the related supplies.
- ✓ Improving individual's productivity and efficiency.
- ✓ Protecting individual's personal health and well-being.
- ✓ Reducing medical, liability and WC claims.

The cost over time for the machine is <u>far</u> less than retail pricing for ice and water, and is far more cost and time efficient than purchasing ice and water through traditional vendors.

THE HYDRATION PRO IS YOUR YOUR HYDRATION SOLUTION!

Machine Weight: 1115 lbs

Hydration Pro Features:

- Ice & Water are Made and Stored On-Site Using Your Tap Water
- Can be used for Indoor or Outdoor Applications
- Quick and Easy to Use - Saves Time
- Adjustable Flow Tube to Accommodate Different Sized Containers
- Closed Door Service Area to Prevent Contamination While Filling
- Bagging Attachment Allows for Convenient Ice Bagging
- Can be Moved to Different Locations or Job Sites Easily
- Filtered Water is Standard - Reverse Osmosis (RO) is Available
- Easy to Manage and Maintain - Periodic Cleaning is all that is Required

Hydration Pro Specifications:

- Choice of the Scotsman Prodigy Line of Ice Makers
- 450-500lb Food Grade, Molded Plastic Storage Bin
- 220 Volt Single Phase Power, 60 Amp Service
- 1/2" Supply/Drain Line (Sump Pump is Included)
- Easy Water Filter Changing Operation
- Plug and Play Electrical System
- Industrial Aluminum Alloy Frame with Professional Lexan Graphics

The Potential Benefits of a Hydration Program:

- Less Costly Than Bottled Water
- Increased Performance/Productivity
- Improved Sanitation over water fountains and other sources for water
- Personal Water Containers Can Be Refilled and carried with the Individual
- Encourages Proper Hydration without having to interrupt activities/job
- Less Labor Intensive than ordering, paying for, storing and picking up water supplies
- Better for the Environment through reduced bottle waste

Environmentally Friendly – Naturally Green!

The U.S. spends billions of dollars on bottled water when perfectly good drinking water is readily available! Not only are we needlessly spending money on bottled water that is not even as regulated as our own tap water, but we are filling our landfills with billions of pounds of oil based plastic products that take thousands of years to degrade. The Hydration Pro eliminates the need for buying bottled water, it encourages the use of refillable, personal containers and reduces waste disposal costs while promoting a "Green" culture within your organization.

With Automatic Bagging Attachment
